Relevant Experience

MBA4HIRE | *Full-Stack Developer* *June 2024 – October 2026*

- As one of two engineers, built a **multi-tenant SaaS platform** (Next.js, TypeScript, Prisma, Azure SQL, PostgreSQL/pgvector) from the ground up, designing its architecture, authentication, tenant isolation, and ~210 API endpoints.
- Designed the platform's **AI orchestration layer**, using deterministic routing and **RAG** to narrow each request to only the relevant tools; built an **eval harness** that replays real traces so routing changes ship with regression coverage.
- Architected a **no-code, drag-and-drop workflow engine** with ~35 reusable node types, run history, and durable suspend/resume, letting non-technical admins automate business processes and replacing ~**30 hours/week** of manual coordination.
- Built the platform's data-integration layer, connecting external SQL warehouses such as Xactly Connect via **Model Context Protocol (MCP)** and a REST SQL bridge, with chunked streaming sync of **millions of rows** into Azure SQL for live dashboards and AI access.
- Optimized platform performance and reliability by adding database indexes, batching queries, lazy-loading heavy views, and cutting redundant API fan-out from ~**12 calls to 1** per view through caching and deduplication.

Technical Skills

Languages : JavaScript, TypeScript, Python, C, C++, Go (GoLang), Java, Ruby, Bash, SQL, HTML/CSS

Frontend : React, Next.js, Redux, Zustand, Liveblocks, Tailwind CSS, MUI, Bootstrap, shadcn/ui

Backend : Node.js, Express.js, Prisma, Flask, Spring Boot

Databases & Data : PostgreSQL (pgvector), MySQL, MongoDB, MSSQL, Azure SQL, Redis, Oracle, DynamoDB, Pandas

Tools & Cloud : Amazon Web Services (AWS), Google Cloud Platform (GCP), Docker, Git, Azure, Vercel, Auth0

Education

McMaster University September 2020 – May 2025

Bachelor of Applied Science (B.A.Sc.), Honours Computer Science *Minor in Art History*

Certifications

AWS Certified Developer – Associate | *Amazon Web Services* *April 2025*

Selected Projects

Bracket Maker | *TypeScript, React, Node.js, PostgreSQL, AWS, WebSockets* | *Ongoing*

- Building a full-stack tournament platform supporting round-robin, single- and double-elimination formats, with **real-time score updates over WebSockets** and automatic bracket progression.

Geospatial Analysis of Second Empire France Artists | *ArcGIS Pro, SQL, Excel* *June 2024 – Present*

- Collaborated with a McMaster Art History professor, Dr. Alison McQueen, on a spatial research project mapping 19th-century French artists' residences and migration patterns, using **ArcGIS Pro**, **SQL**, and Excel to clean and standardize historical data, and analyze how institutional proximity and urban expansion shaped artistic networks.
